- BELLCORE TR-NWT-000332. Case 1: 50% Stress, Temperature at 40°C. MIL-HDBK-217F Notice2 @Ta=25 °C, Full load(Ground, Benign, controlled environment).
 - External with C_{out} = 1uF ceramic/10uF tantalum capacitors.
 - External with C_{out} = 2x150uF polymer capacitors.
 - Output voltage programmable from 0.8V to 5.0V by connecting a single resistor (shown as Rtrim in Table 1) between the TRIM and GND pins of the module. To calculate the value of the resistor **Rtrim** for a particular output voltage **Vo**, use the following equation:

$$R_{trim} = \left[\frac{1200}{V_o - 0.80} - 100 \right] \Omega$$
 - To make sure the module is stable, input external capacitors is necessary that minimize input ripple voltage of the module.
 - To minimize input reflected ripple. External π filter is recommended at the input of the module. The filter is shown as figure2.
 - Delay from Vin,min to application of voltage on SEQ pin.
 - Selecting current share function that the regulations may not meet listed specification.
 - The On/Off signal is referenced to ground. The standard remote On/Off logic of the device is negative logic. Adding a device code suffix "-P" is option for positive logic of remote On/Off.
 - Case 1 :On/Off input is set to logic low (module on) and then input power is applied (delay from instant at which Vin=Vin(min) until Vo=10% of Vo(set))
 - Case 2 :Input power is applied for at least one second and then the On/Off input is set to logic low (delay form instant at which Von/off=0.3V until Vo=10% of Vo(set))

CAUTION: This power module is not internally fused. An input line fuse must always be used.
